

## **Call for Papers**

Welcome to the first *Call for Papers* of the CORALS' Journal of Applied Research (C'JAR). As a fledgling online journal, we are excited to reach out to our current and future friends, family, colleagues, and authors to ask you to consider publishing your research. We also encourage scholars to subscribe to notifications about when we release new journal issues.

Post-Doctorates (i.e., those who graduated with their doctoral degree in the past two years), did you publish your research from your dissertation or capstone? Did you plan to, and then life got in your way? Do you look at that 200-page behemoth and cringe at revising it even one more time? We can help you. Packages are available to help you translate your dissertation or Capstone project into a publishable article. Depending on the length of your study and the resulting article, we can provide you with assistance, editors, and revision work to get that study published.

C'JAR hopes to bridge practice with theory in a way that rarely happens in scholarly, peer-reviewed journals. While this does not mean that you must be practicing in the field of your study, it means that you should include a section tying the findings of your work to practice. Perhaps this means that you created a new compliance framework, and you can see how an auditor could implement that framework into their next audit in a way that might uncover new information more efficiently. It could be that you are an attorney who found a unique way to protect the privacy of your clients' personal information. Maybe you are a scholarly business researcher who found that managers who receive regular praise from their supervisors have employees who produce more, and you want to explain how those findings translate into the workplace. Regardless, consider how your study's findings might help others in your field, whether teaching, medicine, business, law, or even engineering.

Please get in touch with us and let us know how we can give you the confidence to share your research with the world. Too many studies are left behind. Please register on our site and submit your article or reach out to our parent company, Coastal Organizational Research and Learning Strategies, LLC to hire an editor who will turn your doctoral project into an article.

*Michelle Preiksaitis*, Editor-in-Chief

*Amanda Tanner*, Associate Editor and Production Manager
